IMPORTANT NOTICE
This quick start guide provides basic guidelines for the Drexelbrook Universal IV. Refer to the Universal IV Installation and Operation Manual for more detailed instructions.
1-1 Unpacking

- Remove the contents of the carton in a clean area
- Check all items against the packing list
- If there is any shortage or damage, report it immediately to the factory

1-2 Warning - Read the Following Carefully

- Installation, start up, and service should only be performed by trained personnel.
- Substitution of components may impair intrinsic safety.

1-3 General Safety Information - Please Read Before Proceeding to Avoid Injury

- The U IV is approved for use in hazardous locations when properly installed. Control drawings detailing installation guidelines are available in the instruction manual and at www.drexelbrook.com
- Always install to local codes/requirements/directives as mandated by local jurisdiction.
- The aluminum enclosure must be protected from mechanical friction and impact that cause sparks.
- Use the equipment only as instructed in the quick guide. Failure to do so may impair the protection provided by the equipment.
- The responsibility of proper usage of this device rests solely with the user.
- The supplier assumes no responsibility in the event of improper use by the customer.
1-4 Mounting the Electronic Unit

- When installing an insulated sensing element, use caution during installation to avoid damaging the insulation. Puncturing the insulation can render the system inoperable.

- Sensing elements should be mounted so they are not in the direct stream of a filling nozzle/chute. If this is not possible, a deflecting baffle should be installed.

- Do not take the sensing element apart or loosen the packing glands - Follow instructions in Figure 1 below.

- Figure 2 shows several incorrect installations. Take care to avoid these common problems.

---

**Figure 1**

Installing Sensing Element

**Figure 2**

Common Installation Mistakes
1-5 System Description

Each system consists of a Universal IV two-wire, 4-20 mA HART® electronic unit and a 700 series sensing element. A 380 series connecting cable is also supplied for connection of the sensing element to remote electronic units.

The Universal IV system is an admittance-to-current transducer. A change in level produces a change in admittance which results in a change of current. It is termed a two-wire transmitter because the same two wires that are used to power the unit also indicate the change in level (4-20 mA).
1-5 System Description (Continued)

Integral System

Remote System
1-6  Wiring the Sensing Element

**CAUTION** - Before using Intrinsic Safety Barriers, read the manufacturer's instruction for barrier operation. The UIV has a built in current limiter which holds the signal current to a max of 28mA.

The cable connections to the remote sensing element are shown in *Figure 3*

- Do not connect the cable to the sensing element until after the sensing element has been installed in the vessel and the conduit housing has been secured.

- If the sensing element does not have a shield connection, be sure to clip and/or tape the shield wire at the sensing element end of the cable only. See Figure 3

- Only Drexelbrook cables should be used to connect the transmitter to the sensing element as the use of other cables can result in unstable performance.

The cable from the sensing element is connected to the terminal strip below the instrument chassis. The cable connections are probe, ground (GND) and shield (SHLD) - *See Figure 3*

Integral units are pre-wired at the factory - *See Figure 4*

Warning - Please Read Carefully

- Live maintenance in a hazardous (classified) location should only be carried out by skilled personnel trained in explosive protection methods.
- Test equipment used to perform live maintenance must be certified to use in the associated hazardous area.
- The housing cover may be safely opened when the UIV is installed as an intrinsically safe device using agency control drawings.
- For system configuration, remove the view port housing cover to access the display keypad for local system configuration.
- Signal connections are made to the three terminal block on the front of the chassis
- Wiring only needs to be light gauge (20 gauge or larger) due to low power consumption
- Twisted shielded pair cables are recommended

Figure 5
Universal IV Wiring Connections
To enter the configuration menu:

- Press and hold "Enter" button for approximately 5 seconds
- Use "Up" and "Down" buttons to scroll through available menu options
- Press "Enter" to access sub-menu items
- Use "Up" and Down" buttons to adjust settings; available options will be flashing
- Press "Enter" to accept the adjustment OR press and hold "Enter" for 5 seconds to exit to previous menu
1-9 Configuring the Universal IV via Display/Keypad

**FCT 1.01**
Select your desired level measurement.
Unit:
Feet (FEET), Inches (INCHES), mm (MM)
cm (CM), Meters (METERS)

**FCT 4.02**
Enter the level value equivalent to 4mA output.

**FCT 4.03**
Enter the level value equivalent to 20mA output.

**FCT 1.03**
Low point calculation:
Enter the current low level value in the tank.

**FCT 1.04**
High point calculation:
Enter the current high level value in the tank.

Complete
1-10 Universal IV Retrofit Calibration Instructions.

The following instructions are to simplify the calibration of units provided to replace existing AMETEK Drexelbrook transmitters with the Universal IV

1. From Universal III or RCT:
   a. If existing transmitter is functional and a computer with HRTWin is available. The configuration and calibration can be saved and loaded into the new transmitter.
   i. It is strongly recommended to use the latest version of HRTWin. Version 9.0 and above are optimized for the enhanced features of the Universal IV. The download is available from the Universal IV web page at www.drexelbrook.com.
   b. Save file from existing transmitter. File: Save: File name.slt
   c. Install Universal IV transmitter.
   d. Load file previously saved: File: Open: File name.slt.
   e. Configuration/calibration is complete

2. If transmitter is not functional or not HART capable:
   a. Record range setting from existing transmitter, Range Span jumper position on Universal III and RCT or Step Span switch position of Universal II
   b. Edit Universal IV Upper Capacitance setting from Table 1. Parameter is located in lower

c. Proceed with normal calibration per manual or quickstart guide
2-1  FM US Approvals - Install per 420-0004-412-CD

The Universal IV Level Transmitter is rated as Intrinsically Safe for Class I, II and III, Groups A-G and Class I, Zone 0, Group IIC, in accordance with drawing 420-0004-412-CD; Nonincendive Class I, Division 2, Groups A-D Hazardous ( Classified) Locations.

Furthermore, the Integral version is rated as Explosionproof for Class I, Division 1, Groups C & D; Dust-Ignitionproof for Class II & Ill, Division 1, Groups E-G and Class I, Zone 1, Group II B Hazardous (Classified) Locations with an integral sensor that is Intrinsically Safe for Class I, II & Ill, Groups A-G and Class I, Zone 1 Hazardous (Classified) Locations. The Remote version is rated as Explosionproof Class I, Division 1, Groups C & D; Dust-Ignitionproof for Class II & Ill, Division 1, Groups E-G and Class I, Zone 1, Group II B Hazardous (Classified) Locations with connections to a 700 Series sensor that is Intrinsically Safe for Class I, II & Ill, Groups A-G and Class I, Zone 1 Hazardous (Classified) Locations.

2-2  FM Canada Approvals - Install per 420-0004-412-CD

The Universal IV Level Transmitter is rated as Intrinsically Safe for Class I, II and III, Groups A-G and Class I, Zone 0, Group IIC, in accordance with drawing 420-0004-412-CD; Nonincendive Class I, Division 2, Groups A-D Hazardous Locations.

Furthermore, the Integral version is rated as Explosionproof for Class I, Division 1, Groups C & D; Dust-Ignitionproof for Class II & Ill, Division 1, Groups E-G and Class I, Zone 1, Group II B Hazardous Locations with an integral sensor that is Intrinsically Safe for Class I, II & Ill, Groups A-G and Class I, Zone 1 Hazardous Locations. The Remote version is rated as Explosionproof Class I, Division 1, Groups C & D; Dust-Ignitionproof for Class II & Ill, Division 1, Groups E-G and Class I, Zone 1, Group II B Hazardous Locations with connections to a 700 Series sensor that is Intrinsically Safe for Class I, II & Ill, Groups A-G and Class I, Zone 1 Hazardous Locations.
2-3 ATEX Approvals - Install per 420-0004-024-CD

Universal IV Level Transmitter – Integral
II 1 G Ex ia IIC T4 Ga -40°C ≤ Tamb ≤ +75°C; IP66 (For models U**103**00..*)
